In preparation for Jessica Utts's talk on p-values we will spend the class on Sept. 26 reflecting on p-values and discussing the ASA statement and associated contributed viewpoints. The ASA statement on p-values was published in *The American Statistician* Volume 70, Issue 2. MSU has full access to the article and associated supplemental materials.

1. Read the ASA statement on p-values.

    (a) (5 points) What did you learn that you didn't already know

    (b) (6 points) Has this changed your view point on p-values? If so, how?

2. (10 points) Choose a supplementary statement from one of the authors (Note each student will need to choose a different statement). Write a few sentences describing the authors' thoughts or arguments. You will also give a short overview during class.

3. (1 point) What is your favorite part of this class?

4. (1 point) What is your least favorite part of this class?

5. (1 point) What can I do to improve you experience in this course?

6. (1 point) Are there any methods or techniques that you'd like to cover in this course?
